

**CHARGE
HARDER.**

Known world wide for top performance windsurf and surf boards, Carbon Art is now offering New Zealand designed and built kitesurf boards made to perform in the most demanding conditions.

The defined rocker line eliminates bounce while getting the boards quickly on a plane. On waves, the boards are extremely lively and can crank the tightest turning arcs possible with amazing acceleration when slashing the lip. With near indestructible unique epoxy composite technology we can offer the highest strength to weight ratios on the market.

Get out in the most hard core conditions you can find, rip the waves and jump as high as you can, knowing that you will only create huge spray but no heel dings.

With the highest strength-to-weight ratio on the market, customized flex patterns and years of proven research and testing in epoxy composite surfboards, we take your surfing performance to the highest level. Designed and built in New Zealand by a team of dedicated board builders, shapers and surfers.

All Carbon Art boards are individually hand built to your order using cutting edge composite sandwich construction and advanced vacuum technology, to make you the best performance board possible. A board that's stronger, lighter, faster, provides years of surfing and feels as good as the day you bought it.

Length	Width	Thickness	Skill level
5'8"	17 3/4"	2 1/4"	int - adv
5'10"	18"	2 1/4"	int - adv

5'8" complete with fins and straps only weighs 3.5 kg.

SUPERIOR STRENGTH

Design engineered composite sandwich construction provides for the ultimate in strength and performance longevity.

CUSTOM OPTIONS

Custom design your board online and order direct. Flex pattern tuning, coloured sprays, optional extras, it's your call.

We build your board for you - no off the shelf moulded popouts means the ultimate combo of technology and customization.

VALUE

Performance tuned board that stands up to the heaviest wave conditions and continues to perform at its peak far longer than a standard surfboard.

Materials we use create up to 2/3rds less VOC emissions (that cause air pollution and health hazards) than standard PU construction. A step in the right direction for valuing our environment.

FLEX PATTERN TUNED

We tailor the construction of each board model and size for the ultimate in flex response and feel on the wave.
